Your Retirement Plan

Version 2

Generated September 14, 2026

A current summary of the decisions and assumptions from your six-phase Journey. Return anytime to refine them as your plans evolve.

Prepared for Bob Smith

Executive Summary

Monthly spending goal \$9,000 / mo	Social Security income \$3,500 / mo
Other dependable income \$250 / mo	Needed from investments \$5,250 / mo
Annual investment withdrawals \$63,000 / yr	Retirement savings balance \$1,400,000
Initial withdrawal rate 4.5%	Base-case assessment May need adjustment

Resilience review: Sensitive to one or more risks · Tax priority: Keep the current approach and review annually · Survivor priority: Keep the current approach and review it annually

Visual Summaries

These charts restate figures currently saved in your Journey. They are educational planning visuals, not projections or guarantees.

1. Monthly retirement-income funding breakdown

How your monthly spending goal is funded. Total reconciles to \$9,000 / month.

2. Monthly income comparison

Spending goal \$9,000 · Dependable income \$3,750 · From investments \$5,250

3. Initial withdrawal-rate visual

4.5% initial withdrawal rate

Phase 3 assessment: May need adjustment

Scale shown for context only - not a guarantee of sustainability.

This is an initial planning measure, not a guarantee of sustainability.

Phase Details

Phase 1 — Spending & Goals

Completed

Primary result: monthly spending goal of \$9,000 (\$108,000 annually).

Monthly spending goal	\$9,000 / month
Annual spending goal	\$108,000
Other regular income	\$250 / month

Phase 2 — Social Security

Completed

Primary assumption: estimated monthly benefit of \$3,500 at claiming age 66.

Claiming age assumption	66
Estimated monthly benefit	\$3,500 / month
Benefit at FRA (reference)	\$3,500 / month
Decision status	Provisional

Phase 3 — Build Your Plan

May need review

Primary result: May need adjustment.

Monthly spending goal	\$9,000 / month
Social Security in the plan	\$3,500 / month
Other dependable income	\$250 / month
Needed from investments	\$5,250 / month
Annual investment withdrawals	\$63,000 / year
Retirement savings balance	\$1,400,000
Initial withdrawal rate	4.5%
Base-case assessment	May need adjustment

This is an initial planning measure, not a guarantee of sustainability.

Phase 4 — Stress Test

Needs attention

Primary result: Sensitive to one or more risks.

Stress-test result	Sensitive to one or more risks
Selected strategy	Temporarily reduce spending after a market decline

Weaker growth created strain in the tests.

Phase 5 — Tax Strategy

Planning note

Primary priority: Keep the current approach and review annually.

Tax-planning priority	Keep the current approach and review annually
-----------------------	---

Taxes may require larger withdrawals than your spending goal alone suggests.

Phase 6 — Survivor Planning

Planning note

Primary priority: Keep the current approach and review it annually.

Survivor-planning priority	Keep the current approach and review it annually
----------------------------	--

• No single issue stands out strongly from these answers.

Recommended Next Steps

- Review this plan at least once each year.
- Update your Journey whenever your spending, income, investments, taxes, or family situation changes.
- Complete any Journey phases that are still marked for review or need attention.
- Treat each report as a current snapshot—generate a new one after you update your plan.

Keep your plan current

Retirement planning isn't a one-time event. As markets, Social Security estimates, taxes, spending, investments, and family circumstances change, return to your Journey to update your plan, revisit assumptions, and generate an updated report that reflects your latest decisions.

Assumptions and limitations

All planning amounts are in US dollars. Monthly and annual amounts use 12 months per year. The income snapshot assumes all entered income is already available at the same time; it does not fund a bridge before Social Security or pensions start. Keep spending, benefits and balances on the same date and dollar basis.

Phase 3 is an initial gross withdrawal-demand check, not a lifetime sustainability forecast or after-tax spending calculation. The 4% and 5% bands are educational signals, not recommended withdrawal rates. A zero savings requirement assumes dependable income continues.

Phase 4 uses today's dollars, fixed real annual withdrawals before investment growth, 28 years in the base and market tests, and 33 years in the longevity test. Assumptions: 2.75% base real growth, 1% weaker real growth, and a 15% decline before the first withdrawal. Real growth is after inflation; no additional inflation escalation is applied. Income interruptions, differing income inflation rates, taxes, fees and individual lifespan are not separately modeled. Model: hybrid_r2 cash-ledger correction, September 2026.

Phase 2 records a benefit estimate at the selected claiming age; it does not determine SSA eligibility or a household award. Phases 5 and 6 identify questions to review. They calculate no federal or state tax, RMD, Roth-conversion amount, survivor benefit, estate outcome or legal entitlement. No statutory tax year applies to these qualitative reviews. Use the detailed calculators and qualified advice for those decisions.
